

The PR3 Alumni Advantage

Every student who undergoes training with PR3 Systems falls in love with our teaching methods and value addition. It signifies the start of a long term relationship of continuous growth and collective knowledge sharing. We have a discussion group of our alumni, where they have design discussions, collective problem solving, discussing job opportunities. We love our students and they love us.

Here are some of the comments from our students:

This class was excellent to learn about ETL. Through this class, I am able to understand and think about the physical design for my project. The instructor was clearly very knowledgeable on the subject, The game of jeopardy was great in discovering what we learned and to be able to figure out things we didn't capture. It is a fantastic class!!

- Dionne C., Chicago

Rajeev had a wealth of practical, real life examples to back up the concepts. The labs were very useful and gave practical examples of the concepts. Overall, a very useful course that I am sure will make a big difference in my ability to deliver effective DataStage solutions. This has been one of the most informative courses I have ever taken.

- Stephanie E., Toronto

Rajeev is a great instructor – the course was a value addition to the extreme.

- Brenden C., Chicago

Rajeev is the best instructor I've encountered across VMark, Ardent, Informix, Ascential and IBM.

- Steve E., Minneapolis

The instructor knew all the answers!!! Congratulations and Thank You!!!

-Jean F., California

Excellent class. I would recommend it to anybody with no knowledge of DataStage at all. Instructor was very patient and thorough with very good tips which can be used in Projects.

- Ranjana V., Chicago

This class was an absolute boon for me. I had been a consultant on IDMS for the past 16 years. I was looking to get into a Data Warehousing project, but did not have the skill-sets to contribute. The training course not only explained the details of the DataStage ETL tool, but also gave me practical suggestions, guidelines and best practices, which not only got me a position on this project but also made me successful at my current project. Thanks a ton!!!

- Kevin M, Chicago
